- Focus on Clinical Preventive Services
- State Rankings for Selected Measures
- Contextual Factors

**Other Information**

- All-State Data Table for All Measures

**To start, select a State:**

- Either from the drop-down list below, or the map.

Select a State [v] [Submit]

# State Snapshots: How have they been used?

- Arkansas Center for Health Improvement:
  - View of system, tracking baseline, analysis ideas
  - Stakeholders united – *“Things were as bad as we thought.”*
  - Quality improvement “jump started” (EBD)
- Maine:
  - Adapted Snapshots IT for hospital transparency
- FL Sentinel:
  - *Florida’s hospital care falls below U.S. norm, studies show*
- AP Wire Service:
  - *Nursing homes cut back on restraints*

# State Snapshots: Summary Performance Meters

- **Summary meters – a State’s performance compared to its region and the nation for:**

- All Available Measures

- Types of Care

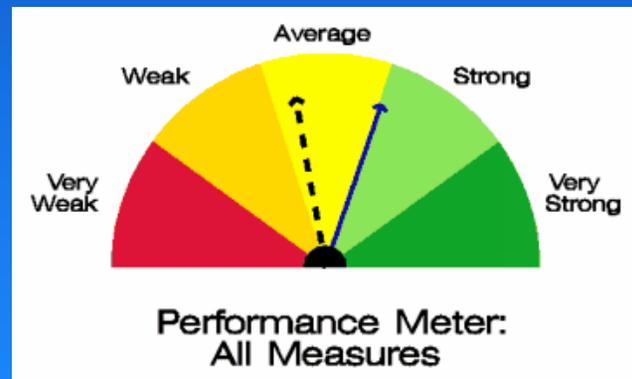

- Preventive
    - Acute
    - Chronic

- Settings of Care

- Hospital
    - Ambulatory
    - Nursing Home
    - Home Health

- Care by Clinical Area

- Cancer
    - Diabetes
    - Heart Disease
    - Maternal and Child Health
    - Respiratory Disease
    - Clinical preventive services

# State Snapshots: What's behind each meter?

## ■ A State's relative performance compared to a group – region or nation

- A subset of NHQR measures (e.g., hospital measures)
- Classify each state's performance for each measure:
  - First, calculate all-state and regional averages
  - Then, determine if state is statistically *better than average*, *average*, or *worse than average*
- Score state for results across all NHQR measures in subset
  - Each better than average measure = 1 point
  - Each average measure = 0.5 point
  - Each worse than average = 0 points
- Sum points and divide by the number of measures

# State Snapshots: Individual Measures

- **Strongest and Weakest Measures for a State compared to all States reporting**
- **State Rankings for 15 Measures**
  - Ordinal rank on individual measures of each State's performance out of 51 States + DC
- **Table of all measures for a State and all measures for all States**

# State Snapshots: Strongest & Weakest Measures

**NHQR State Snapshots - Microsoft Internet Explorer provided by Thomson Medstat**

Address: [http://statesnapshots.s-3.com/snaps07/strongest\\_weakest.jsp?menuId=6&state=CA](http://statesnapshots.s-3.com/snaps07/strongest_weakest.jsp?menuId=6&state=CA)

**California's Strongest Measures**

**Strongest Measures** are those in which the State performed above the all-State average and are strongest among their measures relative to all reporting States. This State may be leading the way in quality in these measures.

Note: The best result for each measure can be either the highest or lowest value. The direction representing best is noted in the "Best" column.

Measure Short Name	Measure Long Name	Best
Home health care - improved bathing	Percent of home health care patients who get better at bathing	highest
Dialysis and on kidney transplant list	Percent of dialysis patients registered on the waiting list for transplantation	highest
Home health care - improved pain management when mobile	Percent of home health care patients who have less pain when moving around	highest
All cancer deaths	Cancer deaths per 100,000 population per year	lowest
Nursing home long-stay residents - with too much weight loss	Percent of long-stay nursing home residents who lose too much weight	lowest
Home health care - plus urgent care	Percent of home health care patients who needed urgent, unplanned medical care	lowest
Nursing home short-stay residents - with delirium	Percent of short-stay nursing home residents with delirium	lowest

**California's Weakest Measures**

**Weakest Measures** are those in which the State performed below the all-State average and are weakest among their measures relative to all reporting States. These measures highlight some of the opportunities for improvement.

Note: The best result for each measure can be either the highest or lowest value. The direction representing best is noted in the "Best" column.

Measure Short Name	Measure Long Name	Best
Pneumonia - pneumococcal vaccination screening in hospital	Percent of pneumonia patients, age 65 and over, who were screened for pneumococcal vaccination and, if indicated, were vaccinated prior to discharge, all payers	highest
Pneumonia - flu vaccination screening in hospital, age 50 and over	Percent of pneumonia patients, age 50 years and over, discharged during October-February, who were screened for influenza vaccination and, if indicated, were vaccinated prior to discharge, all payers	highest
Diabetes foot exams	Percent of adults age 40 and over with diabetes who had a foot examination in the past year	highest
Pneumonia - recommended hospital care received	Percent of pneumonia patients who received recommended hospital care, <sup>3</sup> all payers	highest

**Ranking on Selected Measures**

The following ranking shows how well this State is performing among all the States on 15 important measures of health care quality from the 2007 National Healthcare Quality Report. These measures were selected to represent a broad range of many common diseases.

Measure <sup>1</sup>	Definition	All-State Average <sup>2</sup>	State Rate	State Rank
<b>Cancer</b>				
Breast cancer deaths	Breast cancer deaths per 100,000 female population per year	24.4	23.2	16
Colorectal cancer deaths	Colorectal cancer deaths per 100,000 population per year	17.8	16.1	8
<b>Diabetes</b>				
Diabetes flu shots	Percent of noninstitutionalized high-risk adults ages 18-64 with diabetes who had an influenza immunization in the past year	36.3	27.7	46
<b>End stage renal disease</b>				
Dialysis and good urea reduction - Medicare	Percent of Medicare hemodialysis patients with urea reduction ratio 65 percent or higher	92.8	91.1	39
<b>Heart disease</b>				
Heart attack - beta blocker at discharge	Percent of heart attack patients with a beta-blocker prescribed at discharge, all payers	95.3	93.2	40
Heart attack - ACEI or ARB at discharge	Percent of heart attack patients with left ventricular systolic dysfunction prescribed an ACE inhibitor or an angiotensin receptor blocker at discharge	83.9	84	24

**California**

**Focus on Diabetes:**

**Disparities in Treatment: By Income**

The map below shows whether the gap in the rate of HbA1c testing between people with diabetes with low income compared to high income within a State is worse than, similar to, or better than the gap that exists across all States with data. The bar chart shows the actual percentage of people with diabetes by income who receive HbA1c monitoring in the State (if available), in the region, and in all States.

For 2004-2006, the gap in HbA1c testing for people with diabetes and low income (under \$15,000) compared to high income (\$50,000 or more).

The gap between low- and high-income groups for each State is:

- Worse than the all-State gap
- Similar to the all-State gap
- Better than the all-State gap
- Unknown or data insufficient

HbA1c monitoring uses a blood test that indicates to a health care provider how well a patient's diabetes has been controlled. It is an

U.S. Department of Health & Human Services  
 Agency for Healthcare Research and Quality

**California**  
**Focus on Diabetes:**  
**Lives and Expenses**

2004 Estimated Share of Health Expenditures on State Government Employees that Relates to Diabetes Care, Compared to Pacific States and All States

Category	Share (%)
California	12.9
Pacific States	9.6
All States	6.4

California's Estimated Share of Health Expenditures on State Government Employees that Relates to Diabetes Care, 2004.

States are significant purchasers of health care. An estimated 30,500 California government employees and their dependents likely have diabetes in 2004, and California is estimated to have spent \$219,000,000, or 12.9%, of State government employee health dollars on diabetes care. An additional 13,000 covered lives are estimated to have undiagnosed diabetes or are at high risk for diabetes.

California's Estimated Share of Health Expenditures on State Government Employees that Relates to Diabetes Care, 2004. Barchart. California 12.9; Pacific States 9.6; All States 6.4.

These percents:

- Are rough estimates of the share of expenses attributed to diabetes care.
- Assume that people with diabetes have health care costs that are 2.4 times greater than people without diabetes (Hogan et al., 2003).
- Are missing for the State when data were unreliable.

**California**

**Focus on Diabetes:**

**Excess Costs Associated with Diabetes for State Government Employees**

HbA1c is a marker of blood glucose levels and is used as an indicator of the quality of diabetes care. Diabetes quality improvement programs have produced reductions in HbA1c **on average of 0.5%** across a population of participants. The **best results, reductions of 1%**, occur when intensive disease management programs coordinate assessment, treatment, and referral with primary care.

**Average Results**  
If California's employees' and dependents' HbA1c levels were reduced by **0.5%**, then spending on diabetes care of State government employees might be reduced by about **\$2,900,000** per year. In addition, excess costs due to lost productivity among employees with diabetes could be reduced by **\$34,700,000** a year.

**Best Results**  
If California's employees' and dependents' HbA1c levels were reduced by **1.0%**, then spending on diabetes care of State government employees might be reduced by about **\$5,100,000** per year. In addition, excess costs due to lost productivity among employees with diabetes could be reduced by **\$63,400,000** a year.

**Note—These savings:**

- May not be realized for years.
- Do not include the cost of quality improvement programs that would be needed to achieve a 0.5% or 1.0% reduction, respectively. Depending on intensity, a diabetes disease management program costs between \$20 and \$60 per participant per month.
- Are most likely for a State that has not yet instituted a quality improvement or disease management program for its State government employees.

## California

### Focus on Healthy People 2010: State Performance on Measures Reported in the NHQR

Healthy People 2010 is a set of health goals intended to increase life expectancy, improve quality of life, and eliminate health disparities throughout the Nation. Launched by the U.S. Department of Health and Human Services in 2000, the goals provide Federal, State, and local government agencies and non-governmental organizations with a framework for assessing progress in a comprehensive set of focus areas. Twenty-four Healthy People 2010 measures, sorted by focus area, are shown in the following table; for each measure, the Healthy People 2010 target rate is compared to the most recent State rate and the baseline State rate.

Measure	HP 2010 Target	Most Recent		Baseline		Definition
		State Rate	Data Year	State Rate	Data Year	
<b>Access to Quality Health Services</b>						
Smoking cessation advice	72.0	No Data	2005	No Data	2001	Percent of current smokers age 18 and over who reported receiving advice to quit smoking
<b>Cancer</b>						
All cancer deaths	159.0	166.0	2004	164.0	1999	Cancer deaths per 100,000 population per year
Lung cancer deaths	43.0	42.2	2004	48.1	1999	Lung cancer deaths per 100,000 population per year
Breast cancer deaths	21.0	23.2	2004	25.1	1999	Breast cancer deaths per 100,000 female population per year
Colorectal cancer deaths	14.0	16.1	2004	18.1	1999	Colorectal cancer deaths per 100,000 population per year
Prostate cancer deaths	28.0	23.9	2004	28.4	1999	Cancer deaths per 100,000 male population per year for prostate cancer
Pap tests	90.0	No Data	2005	82.7	2000	Percent of women age 18 and over who reported they had a Pap smear within the past 3 years
Fecal occult blood tests	33.0	No Data	2005	34.2	2001	Percent of men and women age 50 and over who reported they had a fecal occult blood test within the past 2 years
Sigmoidoscopy or colonoscopy	50.0	No Data	2005	49.1	2001	Percent of men and women age 50 and over who reported they ever received a flexible sigmoidoscopy or colonoscopy

**California**

**What is the Clinical Preventive Services Quality Performance Compared to All States?**

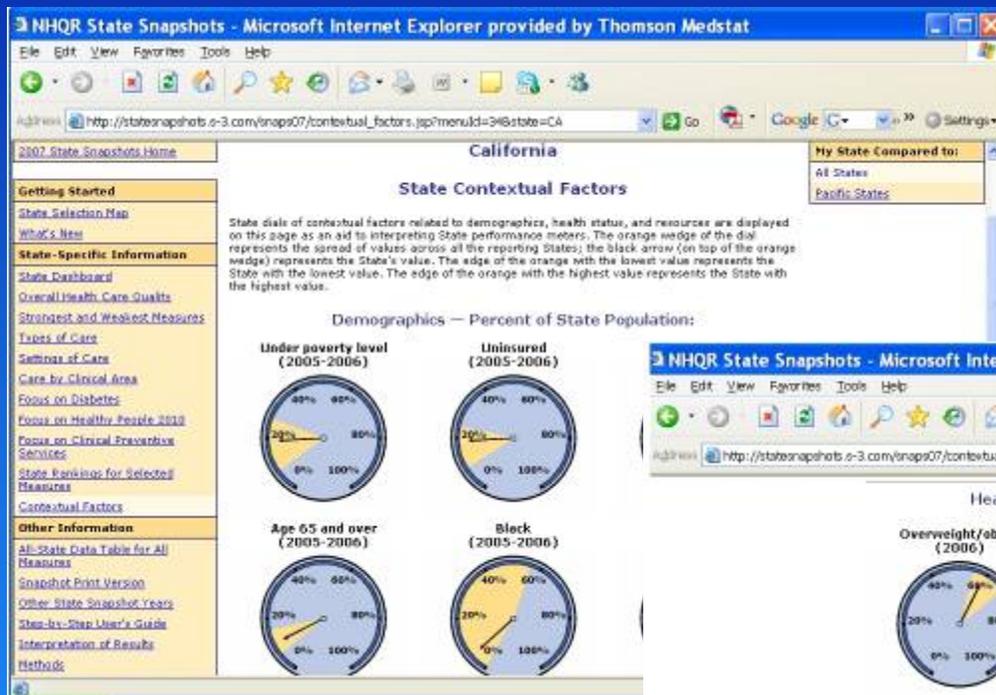

**How Has That Performance Changed?**

The Clinical Preventive Services summary measure represents compliance with selected recommendations of the U.S. Preventive Services Task Force and the CDC's Advisory Committee on Immunization Practice. These two expert bodies use the best research evidence available to make recommendations on preventive services for people without symptoms of disease. Such services include immunizations, tests to screen for the presence of diseases, and behavioral counseling (such as programs that encourage smokers to quit). Most preventive services are provided in primary care ambulatory clinical settings.

# State Contextual Factors

• Click dial to view data

---

# General Questions about Snapshots?

# Questions about Snapshots (Workshop, Special Request)

- Can the Snapshots help states set priorities?  
-- which measures are most important?
- Can Snapshots be redesigned:
  - Users define own state-group comparison?
  - Data by payer type?
  - Data by sub-state geography?
- Could severity adjustments be made for state environments (e.g., LTC patient acuity)?

# Snapshots & Priority Setting? -- Yes

- View the dashboard
  - Which settings/areas strongest? Which weakest?
  - Do the sniff test: Do they confirm what you know about healthcare in your state?
- Examine measures behind the meters to determine:
  - What is being measured?
  - Are some particularly problematic?
- Vet the results:
  - Contact subject area experts in your state
  - Convene a group to discuss Snapshot results
  - Are current priorities supported? Are new ones apparent?
  - Next steps for your State?
- Let AHRQ know what transpires, esp. data problems

# Snapshots Redesign?

- Users define own state-group comparison?
  - Complicates design of Web site, considerably
  - Need to evaluate feasibility and cost
  - One approach: Specify types of comparisons:
    - Low-population-density-states comparison
    - High-poverty-states comparison
    - Magnet-for-tertiary-care-states comparison
    - Others?
- Do you have comments on the value of this?

# Snapshots Redesign?

- Report data by payer type?
  - We think it's feasible within state only for HCUP:
    - HCUP hospital quality indicators by Medicaid, Medicare, Private Insurance, Uninsured
  - Need to assess two things:
    - Which data sources are all-payer?
      - Then recalculate rates by payer
      - Then examine cell sizes
    - Which single payers (e.g.: Medicare, Medicaid) collect the same indicators?
      - Then assess whether enough measures to combine them
- Do you have comments on the value of this?

# Snapshots Redesign?

- Report data by sub-state geography?
  - Depends on detail in data source:
    - HCUP has ZipCode but may not identify hospitals
    - BRFSS may report by county in future
  - Need to assess:
    - Data sets for confidentiality issues
    - Meaningful groupings of counties in each state
  - Major undertaking
  
- Do you have comments on the value of this?

# Snapshots & Severity Adjustment

- Could severity adjustments be made for state environments (e.g., LTC patient acuity)?
  - Suggest data runs to estimate/compare MDS estimates for nursing home patients by acuity level
  - Beyond Snapshots
- On severity & NHQR, generally:
  - Some NHQR measures incorporate severity-adjustment (e.g., AHRQ hospital quality measures)
  - Typically, underlying data or methods not available for severity adjustment
  - Need specialized data and research methods

---
